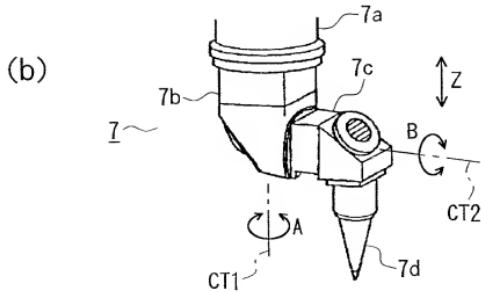

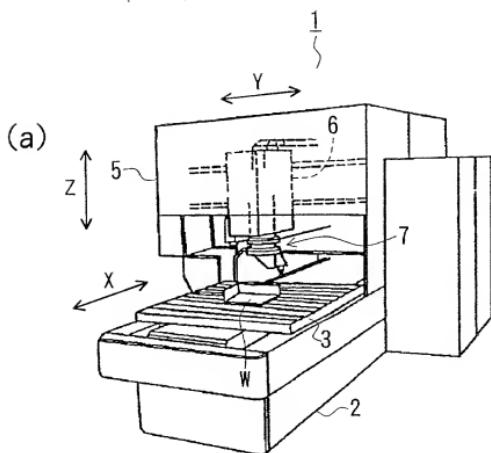

Fig.4

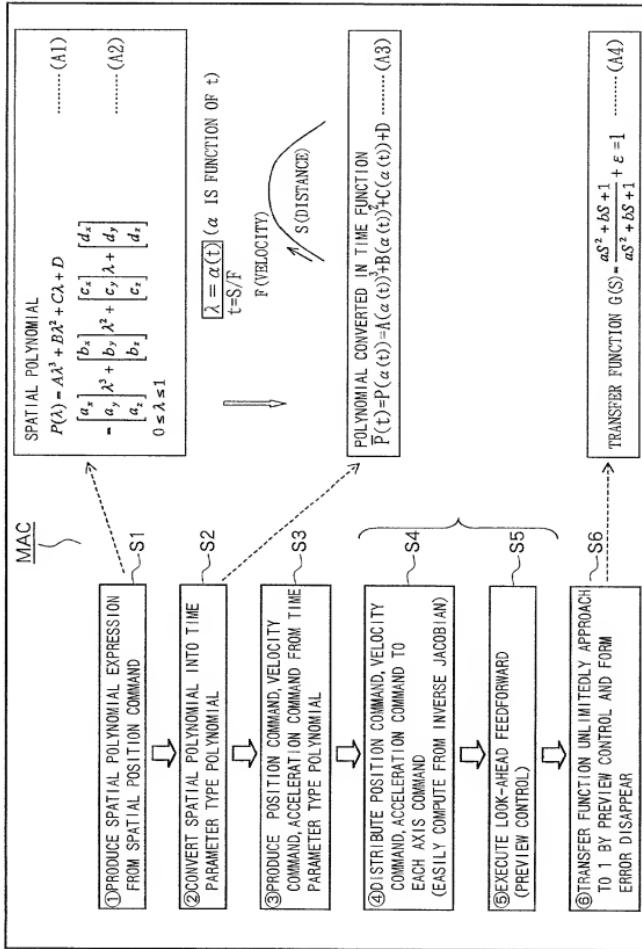

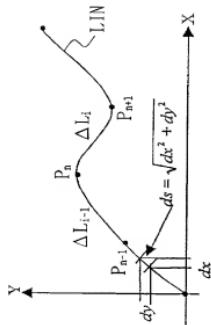

Fig.5

IF LEFT DRAWING IS CURVED LINE DEFINED BY FOLLOWING POLYNOMIAL,

$$y = f(\lambda) = A\lambda^3 + B\lambda^2 + C\lambda + D \quad \dots\dots\dots (B1)$$

$$x = g(\lambda)$$

$$\text{IF } 0 \leq \lambda \leq 1 \quad \dots\dots\dots (B2)$$

IF WHOLE LENGTH OF CURVED LINE DEFINED IS L,
FOLLOWING EXPRESSION CAN BE COMPUTED

$$L = \int_0^L ds = \int_0^L \sqrt{dx^2 + dy^2} = \int_0^L \left[\left(\frac{dx}{d\lambda} \right)^2 + \left(\frac{dy}{d\lambda} \right)^2 \right]^{1/2} d\lambda \quad \dots\dots\dots (B3)$$

FURTHERMORE, FOLLOWING LINE ELEMENT IS DEFINED BY CUTTING PARAMETER λ
WITH SEQUENCE $0 = \lambda_0 < \lambda_1, \lambda_2, \dots < \lambda_n = 1$

$$\Delta L_i = \int_{\lambda_{i-1}}^{\lambda_i} \sqrt{\left(\frac{dx}{d\lambda} \right)^2 + \left(\frac{dy}{d\lambda} \right)^2} \cdot d\lambda \quad \dots\dots\dots (B4)$$

GIVE VELOCITY PROFILE OF VELOCITY FUNCTION $F(t)$, HAVING TIME PARAMETER t
ON THIS CURVED LINE AND OBTAIN FOLLOWING EXPRESSION

$$\Delta L_i = \int_0^t F(i) \cdot dt \quad \dots\dots\dots (B5)$$

λ AND t CAN BE RELATED WITH EACH OTHER BY MAKING LENGTH OF LINE SEGMENT (1)

$$\Delta L_i = \int_{\lambda_{i-1}}^{\lambda_i} \sqrt{\left(\frac{dx}{d\lambda} \right)^2 + \left(\frac{dy}{d\lambda} \right)^2} \cdot d\lambda = \int_0^t F(i) \cdot dt$$

BY SOLVING THIS, FOLLOWING IS COMPUTED
 $\lambda = \alpha(t) \quad \dots\dots\dots (B6)$

Fig.6

WORKING SPATIAL POSITION OF EACH AXIS CAN BE OBTAINED AS TIME FUNCTION BY
 $y=f(a(t))$, $xg(g(a(t)))$ FROM EXPRESSION (3)

THEN, CONVERSION FROM WORKING SPACE OF EACH AXIS INTO JOINT SPACE CAN BE OBTAINED BY FOLLOWING RELATION

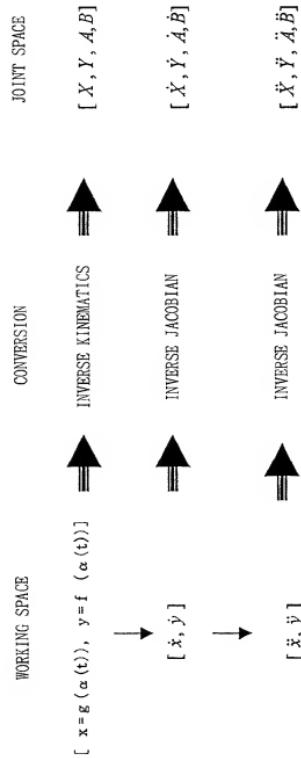

Fig.7
